Protect matching branches
Require a pull request before merging
When enabled, all commits must be made to a non-protected branch and submitted via a pull request before they can be merged into a branch that matches this rule.
Require approvals
When enabled, pull requests targeting a matching branch require a number of approvals and no changes requested before they can be merged.
Required number of approvals before merging: 1
Dismiss stale pull request approvals when new commits are pushed
New reviewable commits pushed to a matching branch will dismiss pull request review approvals.
Require review from Code Owners
Require an approved review in pull requests including files with a designated code owner.
Require approval of the most recent reviewable push
Whether the most recent reviewable push must be approved by someone other than the person who pushed it.
Require status checks to pass before merging
Choose which status checks must pass before branches can be merged into a branch that matches this rule. When enabled, commits must first be pushed to another branch, then merged or pushed directly to a branch that matches this rule after status checks have passed.
Require conversation resolution before merging

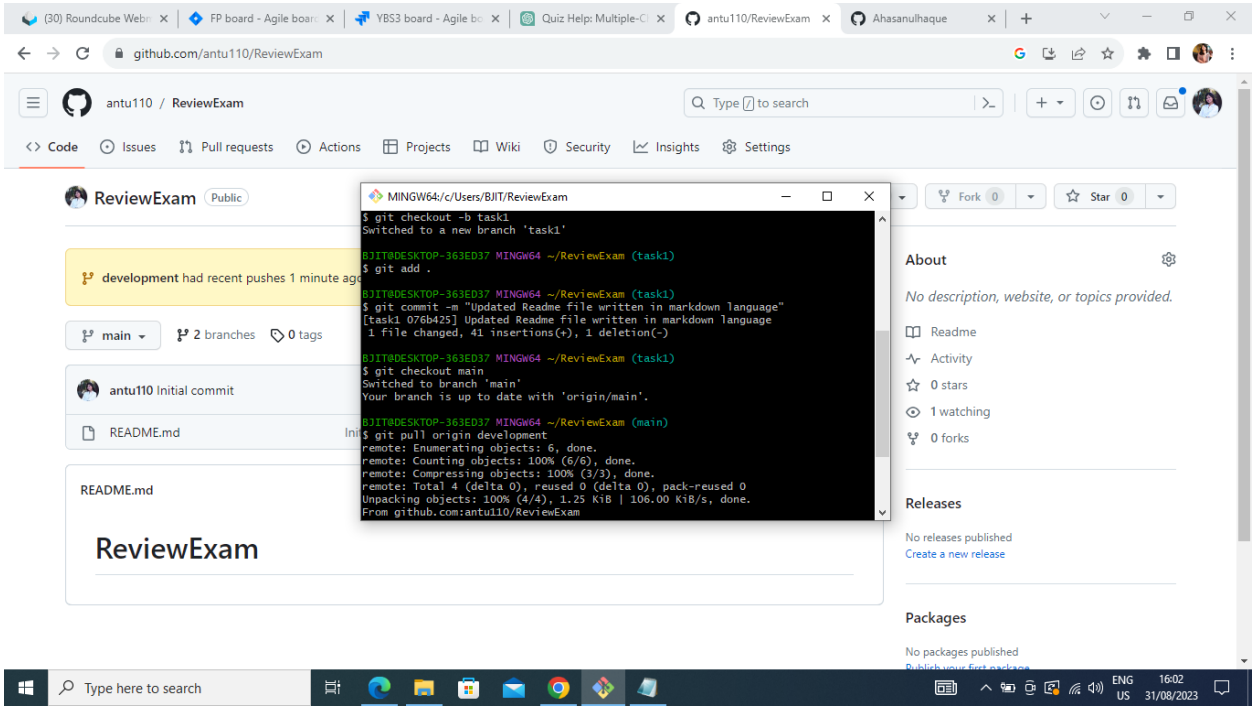
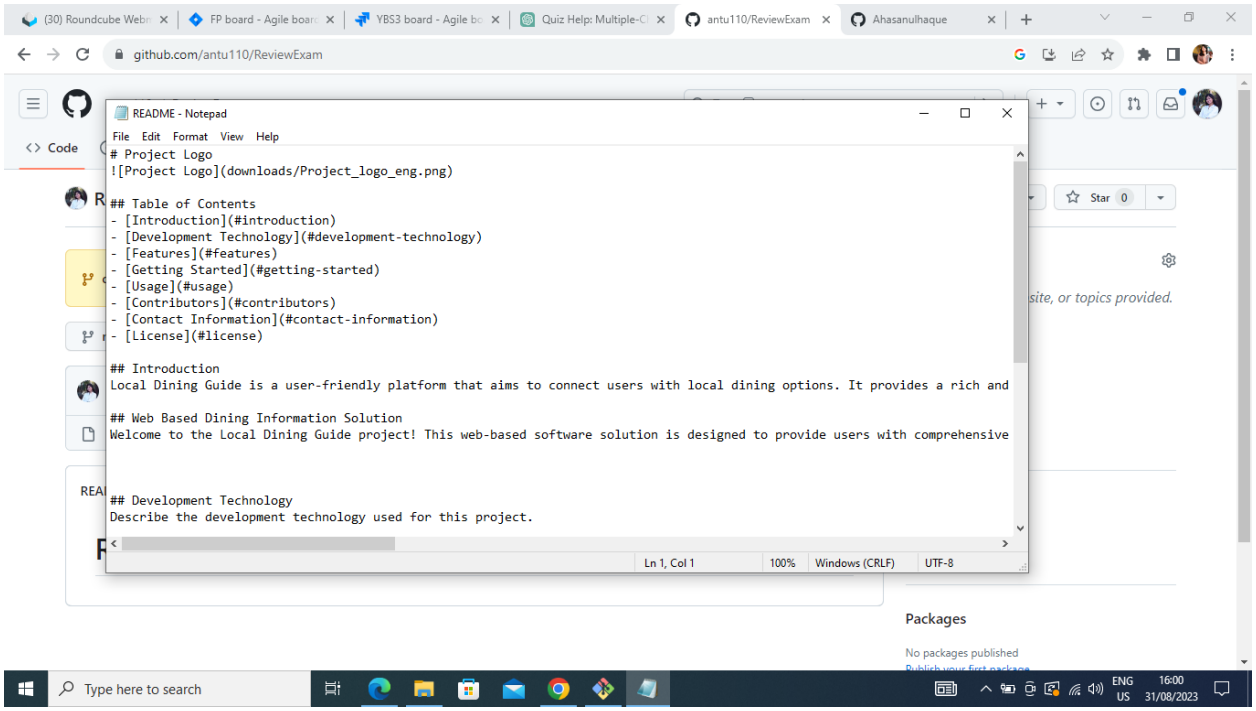
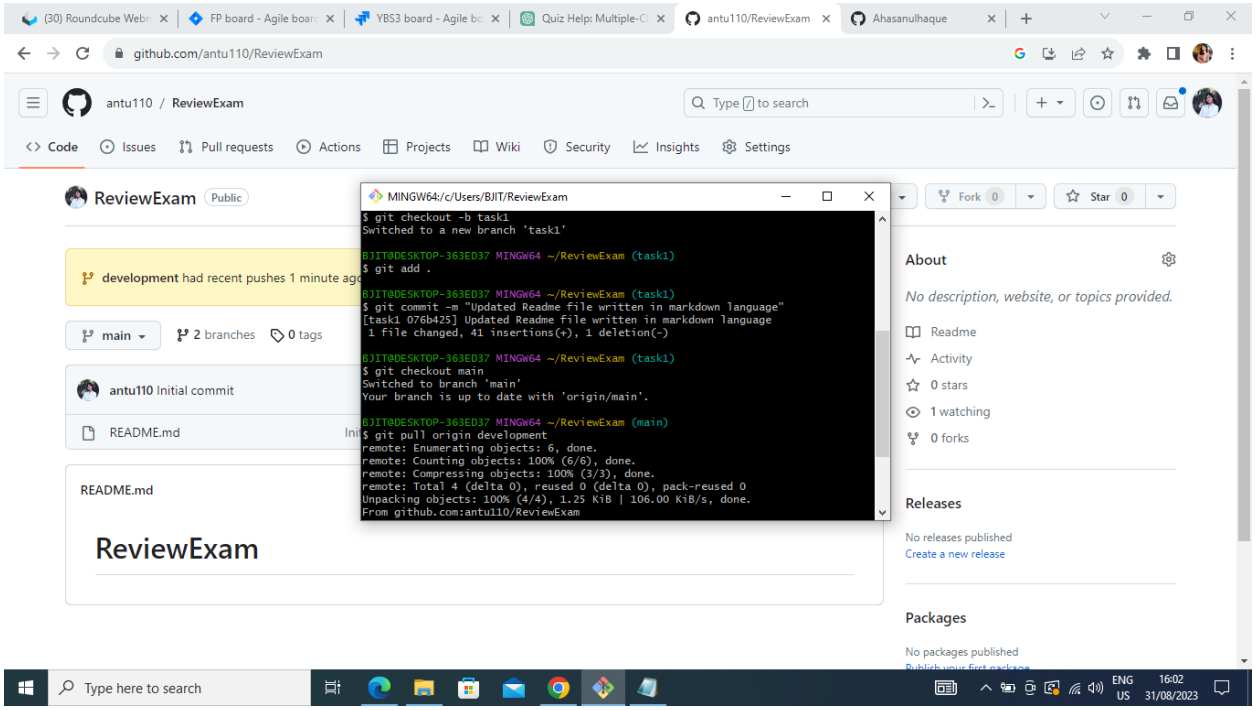
Create a Local Branch & Update Readme File, Adding, Committing:

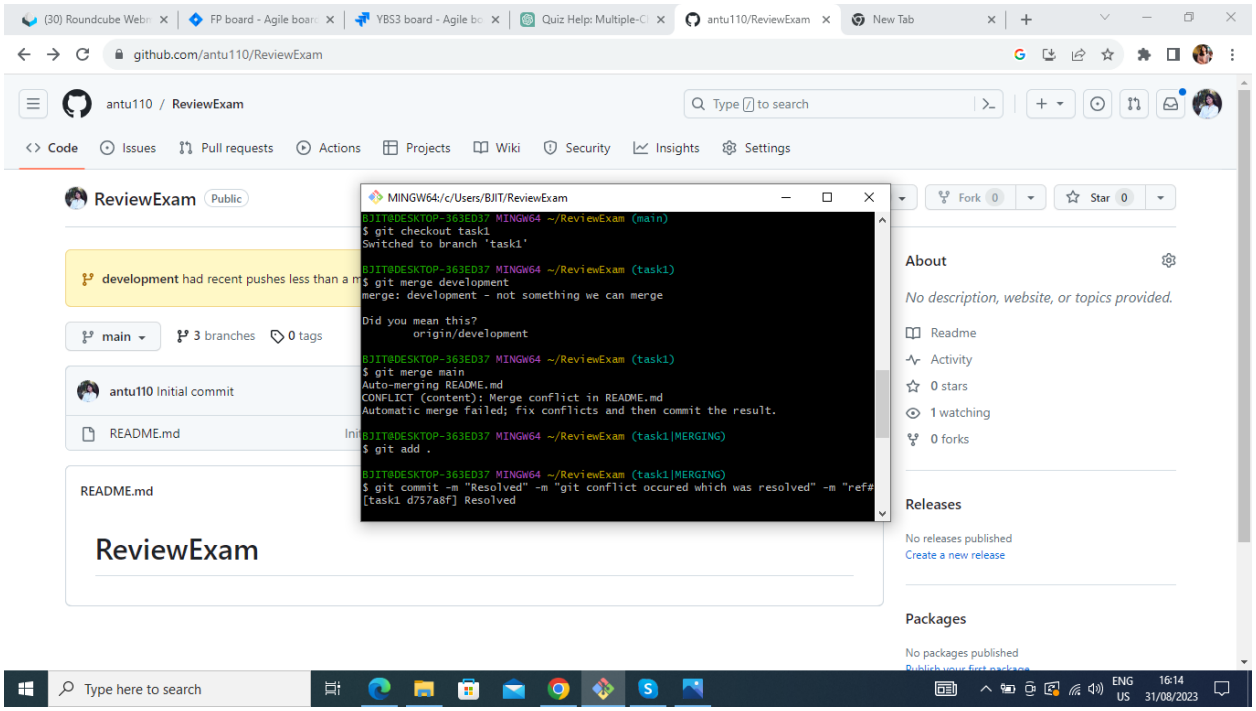




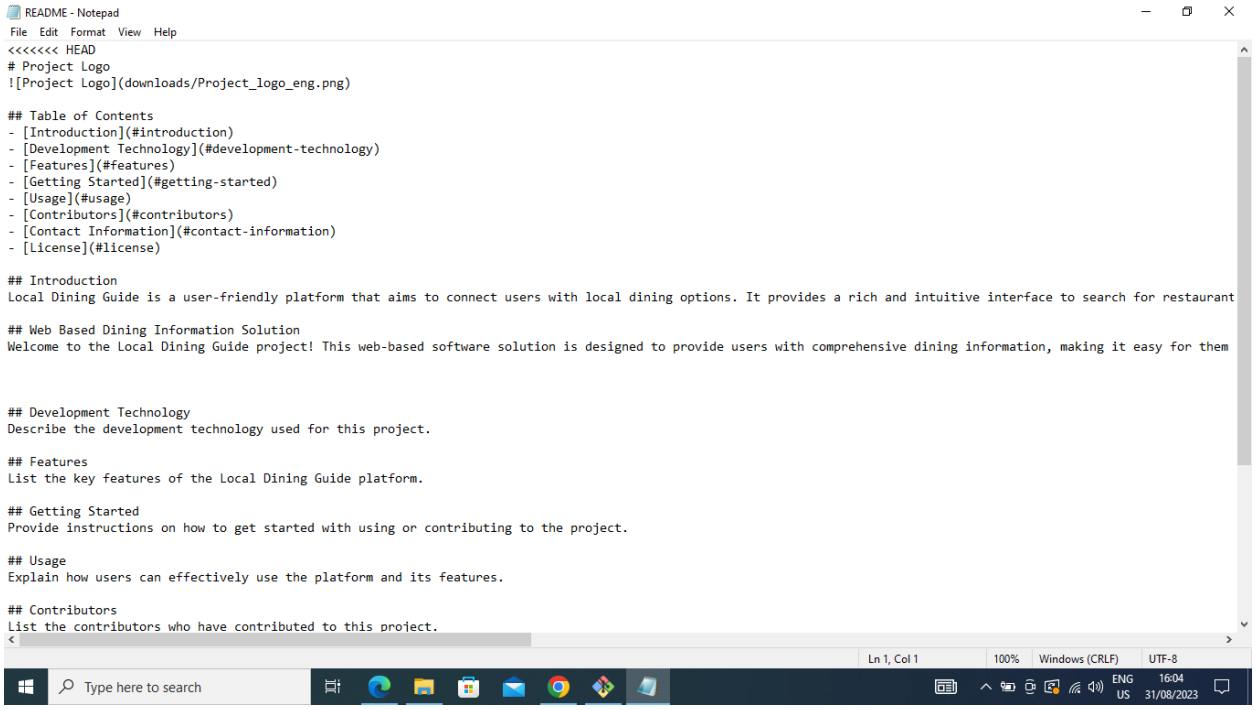
Pull the Development Branch:

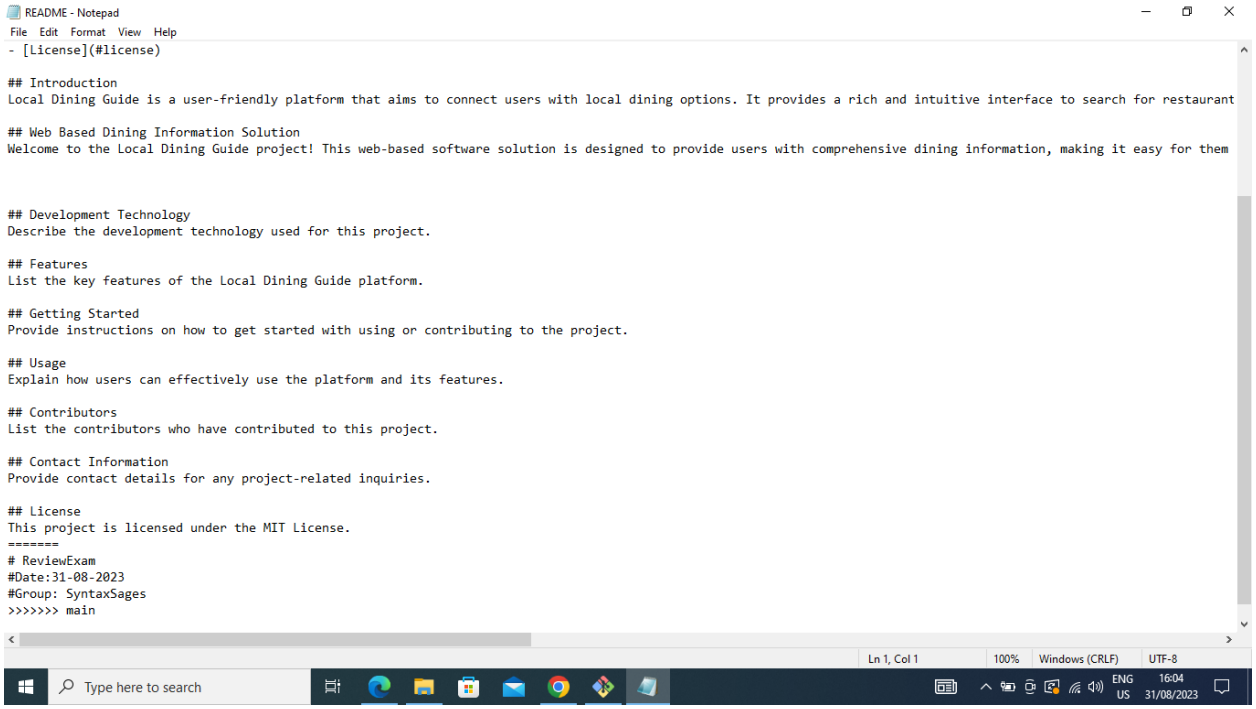


Check Out to Local Branch & Merge:

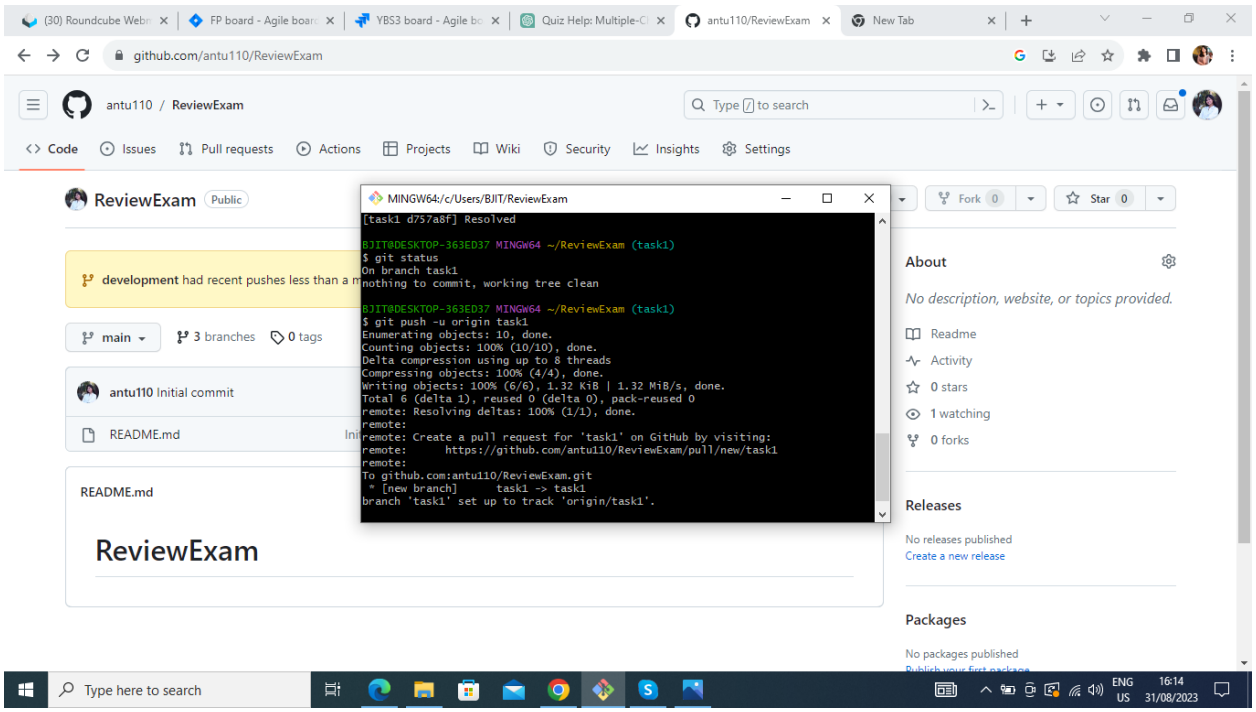


Here, conflict is occuring in the local branch and the conflict is resolved locally.

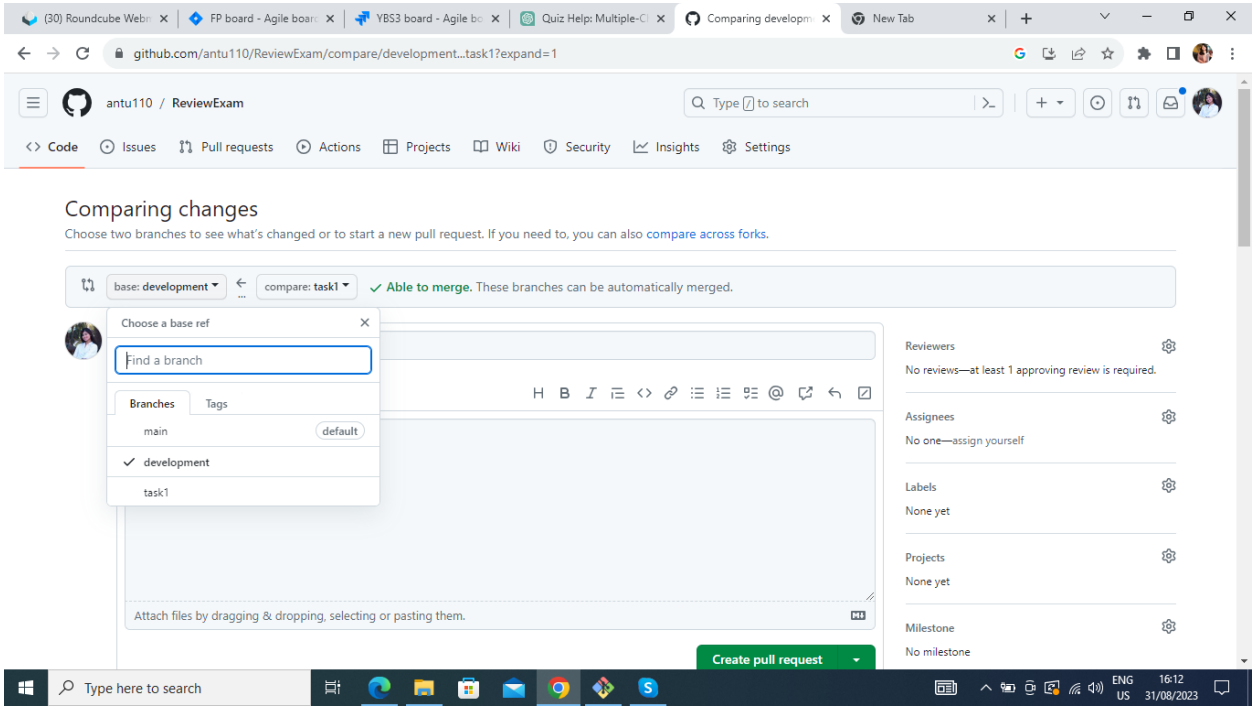




Then, the change is taken to the staging environment by adding and then I did comitting. The committing message is also given according to the best practice.
Then I pushed the Readme.md file in the development branch(remote).



Merge with Development Branch:



Review and Merge Collaborator's Work:

Here I have reviewed and approved the collaborator's work for merging with the development branch.
