Step 6:

1. I added the files using "git add." and committed using "git commit," adhering to the accepted committing procedures of summary, description, and reference.
2. After switching to the local main branch, I pulled from the remote "development" branch after the team Lead updated to it.

```
BJIT@DESKTOP-3N9TI6I MINGW64 ~/Documents/Github/ReviewExam (task5)
$ git add .

Step 7:

Then I changed my branch from main to my locally created “task” again • Then I attempted to merge the local “task” with “main” branch but it was written from the same line as I did in the same file, I have faced conflict .So, I went to the local README file to resolve the conflict.ere I resolved the issues.
